EDUCATION

Belarussian state university of informatics and radioelectronics
Systems engineer

Gymnasium (Mozyr, Belarus)
Physics and mathematics class

SKILLS

Hard skills   Java core, Jakarta, Spring (boot, mvc, security, data), JSP, Docker, SQL, Mongo, Postgres, Kafka, Feign, Liquibase, Git

Soft skills   Diligence, creativity, critical thinking, communication, teamwork

Languages   English (B2), Russian, Belarusian (native language)

PROJECTS

[Rent service](#)
This is micro rest service for performing CRUD operations with cars, their brands and models, with user data and registration of rental orders.
The database consists of 7 tables connected by different types of communication.
Technologies: spring boot, docker, postgres, liquibase.

[Car sharing service](#)
This is a rest service consisting of many services, one of which is RentService.
The api-gateway pattern is implemented.
There is a microservice for adding photos (using kafka, feign, mongo).
Authentication and authorization using spring security.
Communication between services using kafka and feign.
I am continuing to develop this project.

[Phone shop](#)
The project implements jakarta, jsp, htm and css.
This is an online store for selling phones.
It has a lot of pages for viewing products and filtering them, adding them to the cart, placing an order.
When writing this project, I fully studied the jakarta documentation and understood spring more deeply.
